

Image Skincare introduces new products

Cosmeceutical brand Image Skincare has revealed a host of new products, adding to its already extensive range.

First up is Vital C Hydrating Hand and Body Lotion, with a plant complex that supports the skin's natural moisturising factors and improves hydration, while antioxidant metabiotic resveratrol promotes skin density. The lotion also contains macadamia and jojoba oils and sheabutter.

Billed as a "fourth generation"

sheet mask, I Mask is a biomolecular hydrogel mask with mineral-rich Jeju volcanic oxygen water to detoxify. The rejuvenating mask contains brightening botanicals with hyaluronic acid and a copper peptide complex to help reduce fine lines and wrinkles.

There is also a new professional peel, I Peel Lightening Lift Forte, which contains 50% lactic acid for exfoliation and botanical bearberry to have a lightening effect, in an organic aloe vera gel base. For

lips, Ormedic Sheer Pink Lip Enhancement Complex is a gloss with messenger peptides to stimulate collagen renewal and nourishing organic avocado oil.

Finally, Ageless Total Overnight Retinol Masque uses a kemspheres delivery system to allow pure retinol to be easily absorbed in a stable form, resulting in less irritation. The masque claims to increase firmness, reduce the appearance of fine lines and wrinkles and "improve skin imperfections".

Alumier MD launches Bright & Clear Solution

Alumier Labs UK has launched Alumier MD Bright & Clear Solution

Billed as a refreshing skin-conditioning formula, the product is designed to encourage skin cell turnover for a radiant complexion.

It contains lactic acid to exfoliate dead cells and strengthen skin, bisabolol and arnica to soothe, AHA-rich lime pearl to promote a more even tone; and superox-C, an antioxidant extracted from the Kakadu plum, claimed to be the world's richest source of vitamin C.

pH Formula introduces TCA Touch

pH Formula has introduced the TCA Touch MD Line. TCA Touch has the ability to control penetration, resulting in a non-aggressive and multi-functional treatment.

The concentration of 30% TCA results in intense stimulation and cell renewal.

Combined with the delivery complex PH-DVC™, this ensures the rapid delivery of the TCA molecules into the deeper layers with no superficial trauma and excellent skin tolerance.

The benefits are an instant lifting effect, no persistent erythema, no risk of post inflammatory hyperpigmentation (PIH) and no peeling or downtime. The non-aggressive approach makes TCA Touch a safe and highly effective method for managing a variety of skin concerns that is suitable for all skin types. The treatment can also be applied throughout the year.

Dr Terry Loong, integrative cosmetic and skin doctor commented, "In this modern day where patients want fast, effective results without the downtime, I love the TCA Touch with its clever delivery system to offer my patients all the benefits of a skin resurfacing treatment without the common aggression of one."
